Scrophulariaceae (Figwort Family)

Look Alikes: Difficult to distinguish from *P. scariosus* var. *cyanomontanus* and *P. strictus*, but different from these in having shorter corolla lengths (20-22 mm), and

corollas with no glandular hairs.

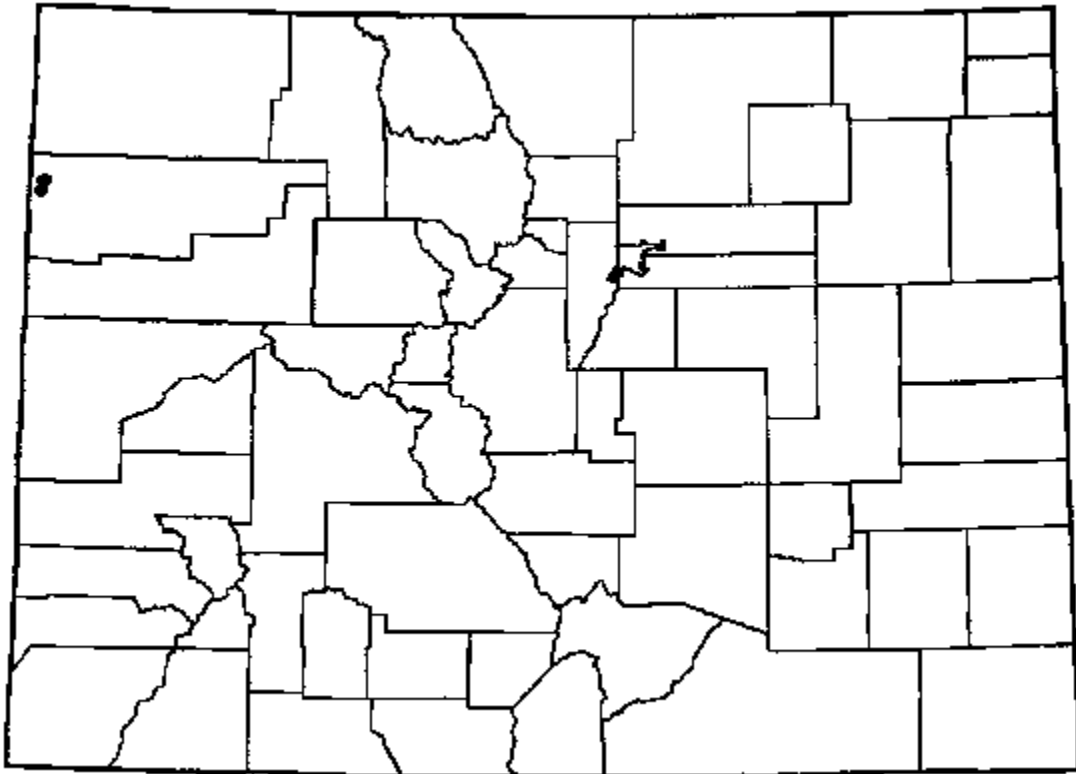

Flowering/Fruiting Period: Late May-June.

Habitat: Mixed desert shrub and pinyon-juniper communities, on sparsely vegetated shale slopes of the Green River Formation. Elev. 5000-7200 ft.
