**Scrophulariaceae (Figwort Family)**

**Look Alikes:** Difficult to distinguish from *P. scariosus* var. *cyanomontanus* and *P. strictus*, but different from these in having shorter corolla lengths (20-22 mm), and
corollas with no glandular hairs.

**Flowering/Fruiting Period:** Late May-June.

**Habitat:** Mixed desert shrub and pinyon-juniper communities, on sparsely vegetated shale slopes of the Green River Formation. Elev. 5000-7200 ft.

**Distribution:** NE Utah and NW Colorado (Rio Blanco Co.).
