**Scrophulariaceae (Figwort Family)**

---

**Look Alikes:** *M. gemmiparus* is the only *Mimulus* species that reproduces vegetatively. Its leaf petiole bases are modified to form pockets containing dormant

embryonic shoots; flowers are usually absent.

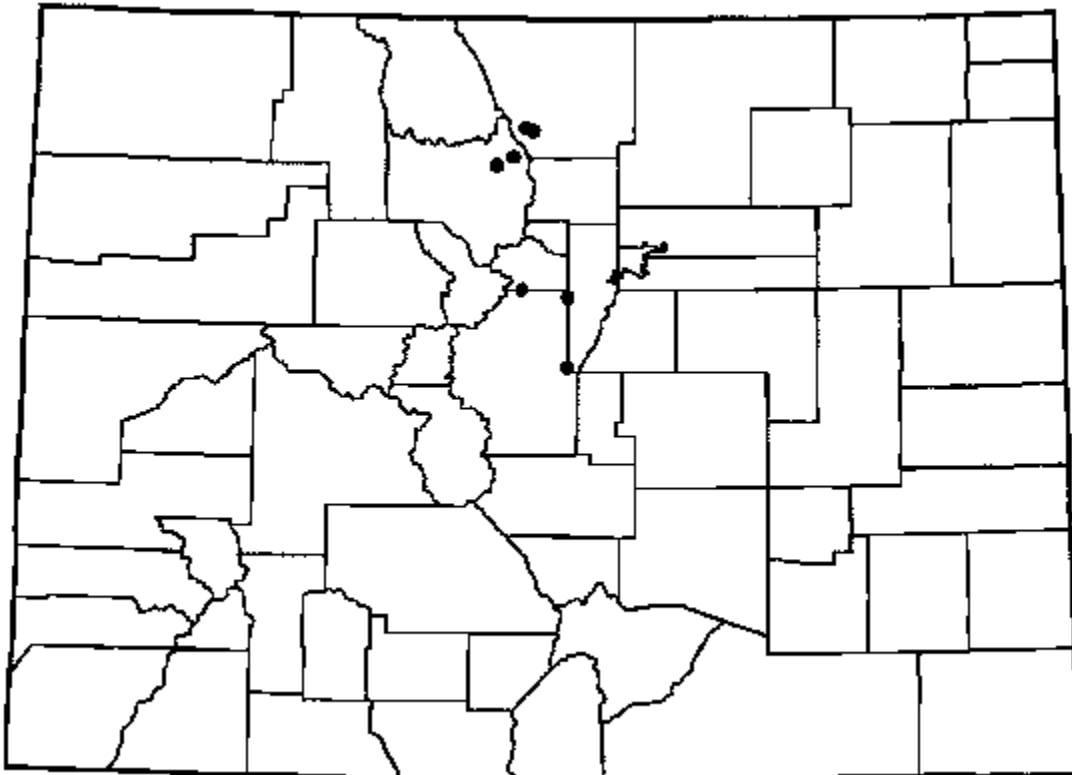

**Flowering/Fruiting Period:** Flowers in mid July.

**Habitat:** Granitic seeps, slopes and alluvium in open sites within spruce-fir and aspen forests. Elev. 8500-10500 ft.
