FWB 260: Principles of Wildlife Management

Fall 2009

Instructor: Rob Schorr
Research Associate: Department of Fish, Wildlife, and Conservation Biology
Office: 134 Wagar
Office hours: 9 – 11 am Mon and Wed, or by appointment
Phone: 970-491-4273
e-mail: robert.schorr@colostate.edu

Teaching Assistant: Jessica Resnik
M.S. Student: Department of Fish, Wildlife, and Conservation Biology
Office: 004 Wagar
Office Hours: 10 am – 12 pm Tues. and Thurs., or by appointment
email: jessica.resnik@colostate.edu

Synopsis:
Principles of ecology applied to management and conservation of fish and wildlife resources. This class is designed for Fish, Wildlife, and Conservation majors, but will be incorporating other natural resource fields where applicable.

Course Objectives:
1. Students will develop a general understanding of the assumptions, effectiveness, and limitations of theories and strategies used to manage wildlife populations and their habitats.
2. Students will develop analytical problem-solving skills and will gain experience in data interpretation and graphical and mathematical models.
3. Students will develop a general appreciation for the challenges and opportunities inherent in wildlife conservation.

Readings:
Your primary textbook will be:

We will read much, but not all, of this book. Additional course material will be taken from the primary literature and other relevant readings. For access to course materials on RamCT you will need an eID user name and password. Visit http://ramct.colostate.edu and find the “student resources” tab to learn more about WebCT.

Supplies: You will need an iClicker for this course. You will need a calculator that can calculate logarithms for possible use on exams. Sharing calculators will not be allowed during exams.

Course Format:
1. Two 80-minute lectures per week: T, Th: 3:40 pm – 5:00 pm, 232 Wagar.
2. Come to class having read the pages assigned.
3. If you miss a class, it is your responsibility to get the notes from a classmate.
4. Please bring questions to class and ask them. Discussion in class is important.
**Course Grading:**

Tentative point allocation for evaluation of students:

<table>
<thead>
<tr>
<th>POINTS</th>
<th>PERCENTAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 Midterm Exams @ 75 points each</td>
<td>225</td>
</tr>
<tr>
<td>Comprehensive Final Exam</td>
<td>125</td>
</tr>
<tr>
<td>Quizzes/Homework/Discussion Participation</td>
<td>ca.100</td>
</tr>
<tr>
<td>Conservation Activity</td>
<td>10</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>460</strong></td>
</tr>
</tbody>
</table>

Pass/Fail is not a grading option. Fish, Wildlife, and Conservation majors must earn a “C” or better in FW 260. Cutoffs for grades typically will be based on the following percentages: 90-100 = A (or A-); 80-89 = B (or B-); 70-79 = C (or C-); 60-69 = D (or D-); ≤ 59 = F; in some instances grades might be based on the performance of the entire class.

**Exams:**

Exam questions will be taken from lectures, guest lectures, textbook readings, and discussion readings (you are responsible for all information in reading assignments, even if it is not specifically covered in class). In general, exams will have some combination of true/false, multiple choice, matching, and short answer. Make-up or early exams are seldom given; rare exceptions are made for catastrophes truly beyond your control. In these cases, I must be notified before the exam and I must have written verification. If I do not have a valid excuse from you before the exam, you will receive a 0. I may choose to use a restricted average of other scores, instead of a makeup.

Once I have returned an exam you have 24 hours to identify any arithmetic errors on my part and I will correct them. If you did not detect arithmetic errors, but want question(s) re-graded, you must submit the exam with a written explanation of your arguments within one week after it was returned in class. Beware! If you submit an exam for re-grading I will re-grade the entire exam to ensure no other mistakes were made (this may or may not benefit you).

**Quizzes and Problem-Sets:**

We will have approximately 4-6 in-class quizzes and 3-4 take-home problems during the semester. In-class quizzes will not be announced. Regular “pop” quizzes are given to: 1) reduce “cramming” for exams by ensuring all students make frequent use of the material; 2) ensure better retention because you study and review material regularly; and 3) reward those who come prepared to class. Most in-class quizzes will be based on reading; thus, it is critical that you keep up with the reading assignments. I do not give make up “pop” quizzes.

Take-home problem sets are due at the start of the class on the due date and will be penalized 10% if received in the afternoon or evening of the due date. No problem sets will be accepted after the due date, unless I accept a catastrophic reason in advance.

**Conservation Activity:**

Each student will be required to conduct an activity relating to conservation (preferably of fish and wildlife) during the semester. Possibilities include, but certainly are not limited to:

1) work at local conservation groups or zoos, 2) assisting ongoing scientific research programs 3) participation in conservation education programs, 4) delivering a public talk or seminar, 5) involvement in a conservation activity with the Student Chapter of The Wildlife Society, the Society for Conservation Biology, or the American Fisheries Society, 6) writing to politicians regarding conservation issues, 7) writing articles regarding conservation issues for the popular press, etc. In the final day of class, students will turn in a brief (1 paragraph) description of their activity, and briefly tell the class what you did.
Helpful Hints:
1. Ask questions; 2. Test yourself by writing questions in the margin of your notebook paper, next to relevant lecture material; 3. Study with a partner or group; 4. Use the TA office hours 5. Keep up with the material. In theory you should be studying 6-9 hrs/wk for a 3 credit class, but for some it will take more time and for others it will take less.

Academic Dishonesty and Disruptive Behaviors:
Cheating and plagiarism will not be tolerated in class. If found cheating, you will receive a failing grade. Distractive behaviors such as talking to neighbors, reading newspapers, regularly coming to class late (unless prior authorization has been given), or leaving class early are also not acceptable; students engaged in such activities may be asked to leave the class. Instances of academic dishonesty and disruption also may be referred to the Office of Judicial Affairs, which can result in University disciplinary action (see Student Rights & Responsibilities section of the CSU General Catalog for more information). As an instructor it is my responsibility to ensure all students have an equal opportunity to learn the material without disruption or distraction. I take that responsibility seriously and will not tolerate such disturbances.

Attendance and Participation:
You are expected to attend all classes, but I will not always take roll. As adults I leave it in your responsible hands to get notes and do the required reading. Your participation in class may benefit you when I assign grades. Those students who have actively contributed in class will find that such participation may teeter their grade higher.

Special Needs:
Please let me know as soon as possible if you have any special needs. If any student has a learning disability please contact the Resources for Disabled Students at 100 General Services Bldg. (west of the running track); phone: 491-6385. That way we can work to accommodate you as soon as possible. It is your responsibility to work with RDS and bring necessary paper work to me.
